Technical Disclosure Package

Northern Lights Programme -- Relay Infrastructure Audit

Reference: AR-2024-NL-001 // Classification: DISCLOSURE // Date: 14 March 2024

1. EXECUTIVE SUMMARY

This package constitutes the full technical disclosure arising from Aletheia Research's 18-month independent audit of the Northern Lights Programme, a distributed relay infrastructure operated by Decima Technologies between 2021 and 2023.

The audit identified systematic undisclosed data retention across 47 relay nodes in the US-EAST-1 region. Compressed operational artefacts including node telemetry, relay camera captures, and synchronisation logs remained accessible on third-party storage infrastructure beyond the programme's stated decommission date of Q3 2023.

2. SCOPE OF FINDINGS

Artefacts recovered during the audit span April 2022 through September 2023. The retained material includes:

- Camera still captures from decommissioned relay nodes (JPEG, EXIF metadata intact)
- Operational telemetry exports in compressed archive format
- Synchronisation manifests referencing internal relay identifiers
- Provenance records linking artefacts to originating node infrastructure

Of particular significance: relay node relay-843481 (US-EAST-1, decommissioned April 2023) retained camera capture artefacts with intact embedded metadata. Provenance records for this node were located at the endpoint documented in Appendix B.

3. METHODOLOGY

Artefacts were identified through certificate transparency log enumeration, publicly accessible cloud storage enumeration, and EXIF metadata analysis of recovered image captures. All artefacts were accessed through publicly available interfaces; no unauthorised access was required or performed.

Full forensic documentation, including raw artefact samples, is included in the supplementary data package referenced in Section 5.

4. DISCLOSURE TIMELINE

Sep 2023 -- Initial artefact identification via CT log enumeration
Nov 2023 -- Extended survey; 47 nodes confirmed retaining post-decom material
Jan 2024 -- Decima Technologies notified under responsible disclosure terms
Mar 2024 -- Disclosure embargo expired; this package published
Mar 2024 -- Copies submitted to the Internet Archive and archive.today

5. SUPPLEMENTARY DATA PACKAGE

The full forensic data package -- including raw relay artefacts, compressed telemetry exports, and supporting evidence -- has been archived and is available for download by qualified researchers and oversight bodies.

The package is provided as a single compressed archive file with no file extension. Format identification is left as an exercise for the recipient.
